# BounceBack<sup>®</sup> Server

BounceBack creates a mirror image of your server on an external eSATA/USB backup drive including Operating System, Applications and User Settings, allowing you to Restart, Resume and Restore...

## 1 Restart

When your server crashes, you can restart in **Instant Server Recovery Mode** directly from your external eSATA/USB hard drive.

## 2 Resume

**Instant Server Recovery** has you up and running instantly! Access your applications, data and settings, including your SQL database without interruption.

## 3 Restore

Use **One Button Restore** to completely restore your server to its last backed up operating state.

Product Features	Description	BounceBack Server
<b>Instant Server Recovery</b>	Restart your Windows server directly from your external eSATA/USB hard drive.	●
<b>One Button Restore</b>	Restore your server to its last backed up state with only one button.	●
<b>QuickRestore™</b>	Restore single files, folders quickly and easily.	●
<b>Backup Sets</b>	Create custom sets of data to backup and specify multiple backup destinations.	●
<b>Automatic Unattended Backup</b>	Schedule automatic unattended backup sets by date and time, or upon connection.	●
<b>Network Backup</b>	Backup to different local or mapped network drives at the same time.	●
<b>Native File Format</b>	All data is backed up in its original file format for easy access, data sharing and transportability.	●
<b>SQL Backup</b>	Backup your SQL database with our open file backup technology.	●
<b>Versioning</b>	View and restore previously saved versions of files.	●
<b>Drive Formatting</b>	Automatically partition and format the external drive to match your server's hard drive.	●
<b>Encryption</b>	Protect your valuable data with AES 256 encryption.	●
